
Access Control Systems

Access control systems monitor employee movement throughout facilities and establish different levels of access to areas within a facility. The ability to control access to specific areas or zones within a facility can be vital in industries where sensitive data or other important resources must be protected or be available to only certain members of a staff. The risk associated with potential damage to sensitive materials is significantly decreased by installing an access control system. How would an access control system affect your organization's ability to restrict access to resources or zones within your facility? Are you currently able to monitor the movement of employees throughout your facility?

Having the ability to monitor employee movement can substantially affect the productivity of your staff. Being aware that an access control system has the ability to track movement will most assuredly keep employees motivated to remain on task rather than taking longer breaks or lunches - which obviously affects the productivity levels in any organization. Are you maximizing your productivity through the implementation of an access control system?

Since access control systems lead to an increase in productivity this also results in an increase in revenues. How would your revenues be affected by the installation of an access control system?

Increased productivity leads to an increase in the level of customer service as well. For example, in shipping and receiving an increase in productivity translates to customers receiving their items in a much timelier manner - an indirect link to an increase in customer service levels. Would it be possible to satisfy your customers even more so than at the current time? How would you rate your current level of customer service? How would your customers rate your current level of service?

Improved customer service is also linked to increased revenues. Satisfied customers will return more often with increased levels of service. Dedicated customers will become long-term partners and build strong relationships with organizations based on quality products and services coupled with exceptional customer service. Would you be interested in building more long-term relationships with your clients?

Another benefit of access control systems is the reduced liability that is inherent with the installation of such a system. Access control systems allow businesses to control the flow of traffic throughout facilities, meaning that high-risk or hazardous materials will have very specific, limited access by employees - reducing the risk that members of your staff will be in the wrong area. This can affect your organization's insurance premium rate. Have you and your insurance agent discussed a reduction in rates based upon installing an access control system?
